

THE PAVING SLAB CO

"Paving the Way"

Some key points to note, and recommendations we make, when **sealing your pavers** are:

- Sealing your pavers can help prevent staining, reduce fungal growth and enhance the concrete colour.
- Sealing will also slow the weathering process by preserving the colour, reducing water absorption and reducing the effects of efflorescence.
- When installing your pavers, try to keep them as dry and clean as possible, keeping dirty boots and feet off the pavers to prevent staining.
- We recommend sealing your pavers once all have been laid and grouted.
- We also recommend regular cleaning with warm soapy water and a broom, then rinsing your pavers off.
- MSDS (Material Safety Data Sheets) sheets are available for both the natural and penetrating sealers the Paving Slab Co. uses, and also sells to our customers.
